

WD21X10060 Solenoid & Bracket Asm.

Attention Service Person

If the dishwasher that you are servicing requires replacement of the drain solenoid & bracket special instructions apply. Dishwasher Manufacturing has changed from a 2 piece bolted assembly to a one -piece construction. The new design is backward compatible and directly interchangeable for the old but models equipped with a Electronic Drain Feedback Switch (EDFS) require use of the WD12X10041 adapter plate enclosed with this kit for mounting of the switch. Two #10-32 machine screws have been included to attach the adapter bracket to the replacement solenoid & bracket. An additional screw to attach the EDFS has also been provided but the old can be reused if desired. See the reverse side of this note for a list of models that are equipped with EDFS. If your model is not an EDFS model, then disregard and discard this notice.
